2. Word wrap (佔分 10 分)

文書編輯軟體經常有提供「word wrap」的功能,可依據文字編輯視窗的可視寬度,將長英文句子截斷顯示於下一行,同時保留句中單字的完整不被切割。以下所示之例子為假設編輯視窗之可視寬度為12個字元,長句子經過 word wrap 後之結果。

若單字之後緊接著標點符號,則該單字與標點符號不會被截斷,如以下例子所示。

[原始句子]

This sentence is an example of word wrap.

[Word-wrapped 後之句子]

This

sentence is

an example

of word

wrap.

若發生單字之長度大於編輯視窗可視寬度之情形,該單字就必須要切割,如以下例子所示。

[原始句子]

A neighborhood is a geographically localized community within a larger city.

[Word-wrapped 後之句子]

Α

neighborhood

is a

geographical

ly localized

community

within a

larger city.

在本題中,給定一個數字代表編輯視窗之可視寬度,及一段英文長句子,產生經過 word wrap 後之句子。

輸入說明:

第1列有1個數字,表示編輯視窗之可視寬度。

第2列為一段英文長句子。

輸出說明:

經過 word wrap 後之句子。

範例輸入:

12

A neighborhood is a geographically localized community within a larger city.

範例輸出:

A
neighborhood
is a
geographical
ly localized
community

within a

larger city.
